

Type Casting :

Explicitly : by using functions like {str(),int(),float(),...}

Implicitly : the conversion between types done automatically like when you divide an integer by a float the result will be a float number

logical operators: used on conditional statements .

And : checks two or more conditions are True .

Or : checks if at least one condition is True .

Not : True if condition is False, and vice versa .

Ciel : round the number up

Floor : round the number down
